

## HYDE PARK

Miss Alice Lafaree is enjoying a week's vacation, spending the time in Morrville.

Mrs. M. C. Thompson has to go to Springfield, Vt., to live with her grandson Irwin Jacobs.

Senator Page has returned to Washington to again take up his duties at the Capitol.

Miss Eleanor Black was at home over the week-end from her school duties at St. Johnsbury.

Chester Savary has returned to New Haven, Conn., after a week delightfully spent at the Inn.

Sheriff Stevens took Miss Shaw of Stowe to Windsor last Friday, she having violated her probationary grant.

Mrs. Nora Wood, who has been in Boston several months, returned home last week, much improved in health.

Mrs. Mary Buckham has gone to Manchester to take up her duties as a member of the Burr & Burton seminary faculty.

The ashes of Clarence Sawyer, who died in Boston a few weeks ago, were brought here last week and buried in the village cemetery. Rev. Mr. Brush of Hardwick rendering the committal service.

## Why Called "Bridgroom?"

Because in primitive days the newly-wedded man had to wait upon the bride and serve at her table upon his wedding day, and thus was a "groom" on this occasion.

## Why "Regatta?"

Water entertainments are called regattas from the Italian word "regata," meaning a boat race. "Regatta" is probably an abbreviated form of "remigata," meaning the act of rowing.

## A Merchant

We know says that it's his job to please his customers. He is 100 per cent right. It's our job to please merchants by providing the kind of printing that is wanted. Try us and see what we can do.

We Make Good

## HOW

## VARIOUS INSECTS CARRY ON BIG "INDUSTRIES."

Every living creature is at work performing chemical reactions and carrying on extensive chemical industries. Albert Parsons Sachs writes in the New York Mail. Every living creature is constantly taking its food and converting it into its own body substance, replacing wear and providing growth. Many of our materials for the arts and sciences are the products of living creatures. The labors of insects, their harm to mankind or their usefulness to us in one way or another are pretty well known, but the materials which they produce valuable for commercial use are hardly ever considered.

The bee is our best-known worker. It produces not only honey, which is the sugar leaven in a particularly palatable form, but also beeswax.

The lac insect produces in the foliage of the trees on which it feeds a material which reaches us as shellac, so widely used in varnishes, phonograph records and electrical insulation.

The cochineal insect is used for the manufacture of the dye cochineal, and its compound with aluminum is known as carmine.

The sting of certain insects produces "galls" on various trees which are the source of part of the tannin of commerce.

Spiders' webs have found use as cross-hairs for optical instruments and for a dressing to stop the flow of blood from wounds.

The largest insect industry is the manufacture of silk. The total amount of silk and silk products imported into our country in the year 1919-1920 exceeded 50,000,000 pounds and was valued at more than \$500,000,000. That we are appreciative of the product of the silkworm's activity is evidenced by the fact that we used more than half of the world's production of silk in 1919-1920.

## Why Phosphorus is Taboo.

The invention of the phosphorus friction match was a very important step in the development of the match. It was brought into general commercial use in 1833. The first of this type made in the United States were manufactured at Springfield, Mass., in 1833. They were of the "strike anywhere" variety, and the inflammable head consisted of white or yellow phosphorus, together with sulphur and other substances that yield oxygen readily in the presence of heat, such as chlorate of potash, red lead, nitrate of lead and peroxide of manganese. White or yellow phosphorus is a deadly poison, which is liable to infect operatives who handle it with a distressing disease called "phossy jaw." The terrible suffering endured by workmen in match factories led to an international movement for their protection, and the use of white or yellow phosphorus now is forbidden by law in practically every country engaged in the manufacture of matches.

## WHY

## Popular Summer Game Became Known as Tennis

Homer, magic word painter, has Naisiana, princess of Phoenicia, playing a game of ball with her maids of honor, which is said to have been the ancestor of modern tennis, after the usual changes and modifications that inevitably occur through the ages.

From Greece and Rome shortly thereafter a like game was taken into other European countries, and during the middle ages we find the royalty, especially the kings of England and France great players of the game.

In France players cried "Tenez," meaning "Take," supposedly meaning "take this ball," with great gusto as they swatted the little ball, and it is from that word that the game is supposed to have derived the name of tennis.

"Tenez" became successively "tenyse," "tenys" and then "tennis" in old English, after the usual procedure of corrupting words of foreign derivation.

For a time tennis was known in England as "rackets," getting that name through another line of nomenclature ancestors, beginning with the Arabian word "rahbat," which meant "palm," and was supposed to apply to a game in which the palm of the hand was used as the bat. "Rahbat" became "racketta" in Italian, "racquette" in French and was Anglicized into "racket" or "racquet"—Chicago American.

## DON'T CROWD GROWING CHICK

Where Space is Limited Youngsters Become Overheated, Causing Outbreak of Colds.

Growing chicks must not be confined to crowded quarters at night. If they are, they will become overheated and, in turn, will lead to the development of colds of which it is very difficult to rid the flock and which may be carried along through the summer and fall, causing a serious outbreak of colds in the laying flocks the following winter.

How can one tell whether or not the chickens have enough room? One of the best indications is the condition of the plumage. If the plumage is bright and clean it is a good sign that the birds are doing well and have room enough. If the plumage is soiled by droppings, it is an indication that there is not room enough for all of them on the roosts, with the result that some are compelled to rest on the floor beneath the roosts and thus become soiled.

A trip to the growing houses after dark will also determine whether enough room is being provided. If there is not space enough so that all the chickens can find room on the roosts, the quarters are too crowded and some of the chickens must be taken out. If all can find room on the roosts comfortably and if the house is well ventilated, the quarters are not crowded and the youngsters should do well.

Don't use harsh physics. The reaction weakens the bowels, leads to chronic constipation. Get Doan's Regulax. They operate easily. 30c at all stores.—advertisement.

## GEN. JACINTO TREVINO

Killed Robles in Defense of His Own Military Honor

Gen. Jacinto Trevino, who is now in Boleo prison, Mexico City, admits, according to a report, that it was in the defense of his military honor that he shot and killed Gen. Jose Robles, brother of the Mexican minister to Spain. Robles had publicly criticized Trevino, who was his superior in rank.

Never attempt to relieve your baby with a remedy that you would use for yourself.

THE CENTAUR COMPANY, NEW YORK CITY.

## SPRAYING CELERY TO PREVENT LEAF SPOTS

Application of Bordeaux Mixture Is Recommended.

Treatment Should Continue Throughout Growing Season and More Especially in Moist, Cool Weather—Apply With Pump.

(Prepared by the United States Department of Agriculture.)

Celery plants should be sprayed with Bordeaux mixture every ten days, to two weeks to prevent leaf diseases, which often seriously injure the crop for market purposes. These leaf spots occur generally in celery-growing districts in the United States during cool, moist weather. Home-made Bordeaux, composed of 4 pounds bluestone (copper sulphate) and 4 pounds lime to 50 gallons of water, is the cheapest and best fungicide for the purpose. The spraying should be begun while the plants are still in the seed bed and continued throughout the season. The sprays should be more frequent during moist, cool weather favorable to the development of the leaf spots.

Healthy Stalk of Celery.

and farther apart in dry, hot periods. Apply the mixture thoroughly with a pump which will give a fine mist spray that will cover the plants, not run down the stalks and fill the figure the stalks.

Since the disease is carried over winter on the seed and in the where diseased celery was grown the previous year, it is important that new soil be used in the seed bed or the old soil sterilized by steam, hot water or formalin solution and that disease-free seed be planted.

## CONCRETE FLOORS ARE BEST

Promote and Protect Health of All Farm Animals and Increase Profits for Farmer.

A concrete barnyard makes a fine exercise lot in all kinds of weather and always affords a dry spot for the animals' bed. Every shower washes the surface clean and flushes the droppings into the manure pits. Concrete yards lighten the work of the housewife, as there is no mud to be tracked on the walks and kitchen floor. The use of rubber boots is unnecessary. On concrete floors not a particle of grain need be wasted. The way to the water trough is always dry, smooth and passable. Concrete floors promote and protect the health of farm animals and increase the profits of farming, stock raising and dairying.

For any pain, burn, scald or bruise, apply Dr. Thomas' Electric Oil—the household remedy. Two sizes 30c and 60c at all drug stores.—advertisement.

## HOLDS WILDERNESS IN SCORN

Japanese Adventurer Thrives on Such Perils as Might Well Daunt Even the Bravest.

Jujiro Wada has always played a lone hand. Up and down the northern fringes of civilization he has pioneered for 30 years. He has been in the thick of every gold rush from the Klondike to Hanson Creek. He is an expert trapper, hunter, cook, prospector, and dog-team driver. From Athabasca to the mouth of the Mackenzie, all old-timers know the little yellow wilderness adventurer.

Soon after the discovery of a gusher well at Fort Norman last fall, winter closed the trails to the new oil bonanza on the Mackenzie. But it did not shut out Jujiro Wada. Ice and snow and howling blizzards have no terrors for him. Employed by Vancouver capitalists to go to Fort Norman and stake claims for them, he struck out for Peace river with a team of dogs in the dead of winter. For 1,200 miles he mushed alone through the frozen, wolf-haunted solitudes, staked his claims and came back across the snow to Peace river.

Now he has been employed by a New York syndicate to go to the top of the world on a hunt for gold. A rumor has long been bruited about the arctic that Herschel Island conceals rich gold deposits. The little Jap will soon leave for the north prepared to spend at least a year on this thunder-riven, desolate rock in the arctic seas. If he uncovers treasure, there will be no delay in bringing out samples. No matter if it is 90 degrees below, Jujiro Wada will harness up his malamutes and break trail back toward civilization. That's his way.

## UNDUE STRESS.

"I shall have to learn to play golf with my left hand," remarked Senator Sorghum.

"Why?"

"I've been out home shaking hands and my right arm is over-exercised."

## Peculiarity Hard to Explain.

It is a peculiar thing that the names given live animals are of Saxon origin, but those given to them when dressed and prepared for food are Norman. For example, the words "ox," "steer," "cow" are Saxon, but "veal" is Norman; "sheep" is Saxon, but "mutton" is Norman; so it is severally with "swine" and "pork," "deer" and "venison," "fowl" and "pullet."

## Estate of Milton Bruce

State of Vermont—District of Lamoille, ss.  
The Honorable Probate Court for the District aforesaid:

To all persons interested in the estate of Milton Bruce, late of Wolcott, in said District deceased, GREETING:  
Whereas, Said Court has assigned the 25th day of Sept. next for examining and allowing the account of the Administrator of the estate of said deceased and for a decree of the residue of said estate to the lawful claimants of the same, and ordered the public notice be given to all persons interested in said estate by publishing this order three weeks successively previous to the day assigned, in the News and Citizen, a newspaper published at Morrville and Hyde Park, in said District.  
Therefore, you are hereby notified to appear at the Probate Office in Hyde Park, in said District on the day assigned, there and thereto contest the allowance of said account if you see cause, and to establish your right as heirs, legatees and lawful claimants to said residue.  
Given under my hand, this 1st day of Sept. 1921.  
NOYES G. WOOD, Judge.
